## Paddock Vacs: Vacuum manure in seconds.

The Greystone Paddock Vac range is now proudly exported world wide, with agents in the US and Europe. We are also very proud to have world famous dressage champion, Steffen Peters as our ambassador. Steffen uses the Greystone Maxi Vac & Arena Rake Pro.

Simply attach your Greystone Paddock or Maxi Vac to your ride on mower or quad bike and vacuum manure and it's harmful parasites in seconds!

Your pasture will thrive using a Paddock Vac, regularly vacuuming manure helps to eliminate bare spots and weed infestation, not to mention the reduction in worm count and fly infestation.

You will save time allowing you more time to ride rather than countless hours cleaning.

Greystone's mid sized Paddock Vac is perfect for properties with up to 10 horses as it holds 3 to 4 good-sized wheelbarrows of manure. Our Maxi Vac 800 ltr model was designed for larger properties to reduce the time sent emptying; it also has a larger frame, wheels and tyres to carry the extra load.

Powered by the reliable Honda 4 stroke 50cc new generation motor with 3 year domestic warranty. Greystone's powerful vacuum removes manure in wet or dry conditions, long or short grass, leaving little or no residual unlike manually picking up manure. You can also vacuum in the wettest of conditions as nothing but return air passes through the Honda motor impeller. Keep in mind that everything you vacuum is dropped straight into the collection bin. This allows you to also vacuum leaves, pine cones, hedge clippings and even empty the water troughs.

Isn't it time you turned to Greystone for help with your paddock maintenance? Visit us on the web today for a online video demo!

### Specifications:

Engine:	Honda 4 stroke
Engine size:	50 cc
Fuel:	Unleaded
Fuel Tank:	1.27 ltrs
